

Instructions for TaylorMade R15 Weights Removal

The TaylorMade R15, as you can see, has 2 weights. They are different from the SLDR which has only one. This 2 weight system allows you to move each weight independently: toe for fade and heel for draw. These instructions will show how to remove the weights.

First, un-screw the weight. The weight has 2 sections the top weight and the bottom weight. We offer them in 6 gram, 8 gram & 15 gram weights.

In order to remove the bottom weights, slide the loosened weight to the heel section of the head. There is a slot in the track the weight falls into.

You can remove the bottom weight by tilting it forward (towards you) and the weight will slip out from the groove.
